48V SHVS Mild Hybrid System

The 48V SHVS mild hybrid system consists of a 48V Integrated Starter Generator (ISG) with electric motor function, 48V lithium-ion battery and 48-12V DC/DC converter. With a greater supply voltage than conventional 12V, it increases both regenerated energy from deceleration and the amount of electric motor assist to suppress fuel consumption and enhance driving performance. While prioritising fuel efficiency in normal driving situations, the system adds electric motor torque to the engine torque by using either of two functions (torque-fill control or torque boost) when it judges that the driver is requesting quick acceleration. Moreover, the electric motor idles the engine and eliminates fuel use during deceleration to further enhance fuel efficiency*.

1.4 BOOSTERJET Engine

The 1.4-litre direct-injection turbo engine enhances the torque driving of the S-CROSS. The intercooled turbocharger forces pressurised air into the cylinders and enables the engine to maximise torque in the low engine rev range, even at 2,000 rpm. The direct injection system further enhances fuel efficiency by optimising control of the amount, timing and pressure of injected fuel in direct fuel injection. In addition, fuel efficiency is also raised by a high compression ratio, electric intake VVT and cooled EGR.

* The electric motor doesn't idle the engine while the air conditioner is in use or the remaining battery power level in the information display is 3 or lower.

* ESP is a registered trademark of Daimler AG. The ESP is designed to help keep the S-CROSS under control. However, its effectiveness depends on driving conditions and the state of the road surface. If the tyres exceed their grip limit and the wheels start to spin or skid, it may not be fully effective.

Flexible Luggage Space

The 60:40-split rear seatback and multi-position luggage area board make it easy to accommodate a variety of cargo.
